

Integration in the site

The intervention is powerful yet respectful, dramatic yet silence, strong yet necessary. The trasparency and lightness of the piece makes it float over the bay and do not cover the view towards the ocean, making the proposal minimal and sensitive.

Calm and quiet proposal

In opposition to the loud old pier who has lost his original function of gathering people and using it as a meeting place. We recover all this intentions with the new pier, proposing only light or temporal programs to make it more dinamic, cultural and human.

New programs

The programs will be orientated to relaxation and gathering people. We propose net structures for lying, piers for fishing, small places to reach it with the boat or paddle surf or just a beatiful and romantic end of the pier where visitors can see the sunset.

The structure is mobile, the space can be modified.
The building materials are air and dynamics.
