

# LILIES OF THE OCEAN

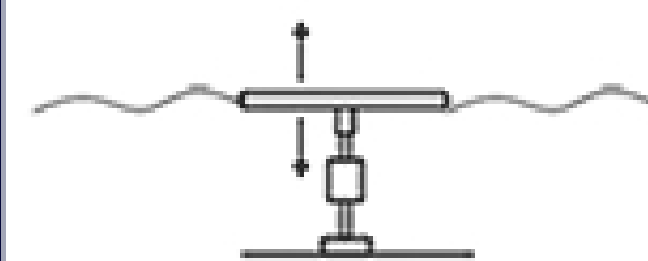

Santa Monica  
Pier 2016

water lily

Petals work as  
Solar Point Focusing

Leaf works as float  
to move with waves

The flower opens at sunrise closes at sunset, and follow the sun movement due day. The lilies of the ocean also follow the sun movement to introduce more efficient solar energy. This system called Point Focusing system using Dish/Stirling system. The famous leaf at the surface of water act as a float that uses in wave energy. This system called Pint Absorber, using the motion of the water to move up and down to produce power.
