

THE PANELS ARE MADE OF GLASS AND ARE BRIGHTLY COLORED. THE COLORS SERVE TO ALERT THE NATURAL WILD LIFE OF THEIR PRESENCE AND TO REPRESENT THE CORAL LOST DUE TO UNSUSTAINABLE LIVING.

HOLES THAT ARE 6" IN DIAMETER PENETRATE THE GLASS PANELS. FANS ARE WITHIN THESE HOLES AND SPIN AS THE WATER CURRENTS PASS THROUGH. THIS PROCESS CREATES ENERGY SIMILAR TO HOW A WINDMILL CREATES ENERGY IN THE WIND.

THE NUMBER OF PANELS CAN BE INCREASED OR DECREASED BASED ON THE AMOUNT OF ENERGY THEY PRODUCE IN THE FIELD AND WHAT IS REQUIRED.
