

E•YACHT

E•YACHT which produces energy from abundant natural resources of this site is devised to solve and encourage awareness of sever water shortage in California. This structure is designed with the form of yacht, and adopts desalination as a main energy producing system by distillation which is a way to produce drinking water from sea water.

The idea of yacht comes from the fact that Santa Monica Pier was a yacht harbor in the past. By reappearing the past memory, the site will be a symbolic place for visitors to recall the forgotten image of Santa Monica Pier.

E•YACHT is designed as a friendly and fun structure for visitors by taking the production method of origami which accords with the entertaining characteristic of Santa Monica Pier and which is intimate to people. Besides, it will give interesting attraction to visitors from the changing look of E•YACHT from day to night time by taking the foldup characteristic of origami.
