

LIGHT DROP

"Light Drop" explores the water-theme in relation with both science and art, transforming the drought-emergency into an optimistic message of sharing beauty.

The "Drop" has a photovoltaic surface and houses a desalination plant: during the day it resembles a drop of water suspended over the skyline, while during the night it represents a welcoming lighthouse.

The educational purpose of the project is to focus the people attention on the urgent need to solve California's water crisis, developing a greater water-awareness among the young generations.
