

### Variation of luminous istallation in relation to the waves motion

The light installations show the immediate buoy energy production reinforcing the visual and conceptual link between the ocean and the observer.

The Santa Monica Pier ideally continues through the ocean with technological appendixes which capture the energy from the sea and transform it in light instal-lations and/or energy for Pier's activities.

During nights the buoys show an unexpected ocean side to the attendance: its enormous energy potential that can be turned into a spectacular natural play with the use of this special Power buoys.

Buoy's lights react instantaneously to the waves energetic production, they cre-ate a different show to each visitor and moment. We can represent it with the ocean breath or dance.

Energy Farm - Croos section

### Night-view from the beach
