

On the artwork

## Big Balls

An elegant and simple way to use Sun, Wave and Tidal energy to create sustainable electricity and clean water for the City of Santa Monica.

A composition of giant transparent plastic balls, positioned and scaled to mimic the order of water molecules, with a base of floating rectangular platforms that slowly move with the waves like piano keys. An artwork that is completely safe and accessible for anyone to contemplate, sun-bathe on, walk on or use as a secondary beach, creating a new kind of public space and at the same time generating sustainable electricity and producing water for the city.

**Water production:** The spheres produce **37.8m<sup>3</sup>** of water per day, which is equivalent of **50 homes**.

**Energy production:** The artwork produces 5MW per platform totaling **110MW** enough to power **24,420 homes**.
