

An Eero Saarinen-inspired wavy overhead plane, constructed with stainless steel, is bound to the winding path through fiber optic cables that glow in soft purples and blues, and then brighten to reds and pinks as visitors walk by on the paths. This creates an interactive experience between the the art the experience of the path and the ocean.

Experience the highs and the lows of the ocean in an interactive way, see the underwater systems that provide energy and ecological refuge for a diverse system of plants and animals, and also experience the night life of the Santa Monica Pier in a beautiful and safe new way.
