

When moving to the extreme position, several plates consist of an activity area as a whole, which allows people to hold different activities such as parties, exhibitions, music festivals. etc. Some plates can work as a small pier so that people can take the mosquito crafts to reach our project site. Some of the plates are not allowed to move, under the plates, we install some buoys which are jointed with solar panel boxes through vertical orbits are installed under these plates; some of the plates are linked with the Archiedes Wave Swings and can move along with the wave movement through the horizontal slide orbits; there is another kind of plate which is actually an overtopping wave energy converter, it can move in vertical direction, people can enter this area only through the scenic bridge. The design also possesses some educational purpose, viewing the vivid energy installation, the masses may be guided to develop a strong sense of responsibility to protect the energy resources and our environment.
