

Floating Wetland
These pods can also be vegetated with remediating plants, capable of remediating toxins in pond's water

California beaches are a common destination for many migrating birds and birding enthusiasts. Some species make the California coast their final stop; others rest here for a day or two before continuing on.

We propose to create a new stop for the California coast route of migratory birds through several modules or floating wetlands with a suitable terrestrial

Planting Media and Floating mat:
Intertwined fine polymer strands.
Made of recycled plastic and recycled styrofoam

Biofilm covered roots

- 1.Ormond Beach
- 2.El Matador State Beach
- Santa Monica Beach
- 4.Playa del Rey Beach
- 5.Bolsa Chica State Beach
- 6.San Onofre State Beach

3. A NEW STOP FOR MIGRATORY BIRDS
