

MELODY OF THE OCEAN

Different positions of solar boxes at different moments during a single day

Different positions of mobile plates at different moments during a single day

movement of plates

Site-Plan

Design concept:

The overall design shows great respect for nature and the feature of the site, it emphasizes on the sustainable development of modern society by perfectly combining energy exploration with landscape design, in that case, normally brand energy installation could be turned into artistic and entertaining land art. The project visualize the invisible rhythm of the sea waves into visible landscape installations which can move along with the sea waves in different directions. The project offers a great chance for the local people to comprehend the sustainable energy installations and feel the rhythm of the ocean in a more authentic way, in this way, the masses may cultivate a sense of responsibility to pay more attention to develop the sustainable energy resources in an environmental friendly way.
