

FLYING NOCTURNE

At the end of route 66, the Flying Nocturne extends the journey beyond the Santa Monica Pier further into the sea, guide the memory along route 66 to the Pacific Ocean, leap, fly and merge into the history. It is sculptured as giant waves lifted and staggered from the sea level, strong, elegant and dynamic. Other than shape, there are more reasons that make the Flying Nocturne dynamic. It is an integrated installation that harness solar, wave and wind energy to generate electricity and produce pure water. It makes itself an adaptive and versatile habitat for various marine lives as well as an inviting attraction for visitors to experience a lot. Why is it "Nocturne"? That because after sunset, music and joy are really going to fly out from the installation. something is wrong.
