## THE CELEBRATION OF FRESH WATER PRODUCTION AS A TOOL TO STIMULATE PUBLIC AWARENESS

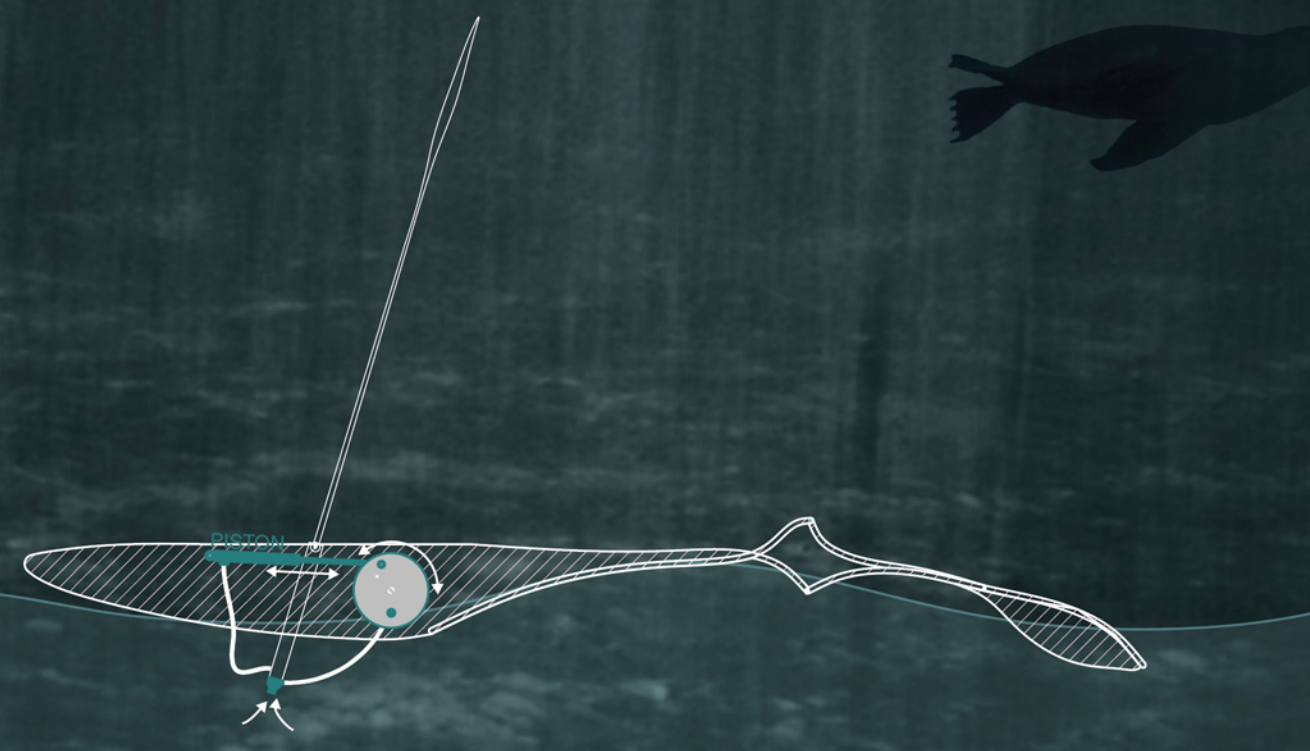

### WAVE POWERED

The sculpture is articulated in order to react to the waves.  
-a succession of waves will initiate the movement of the structure-

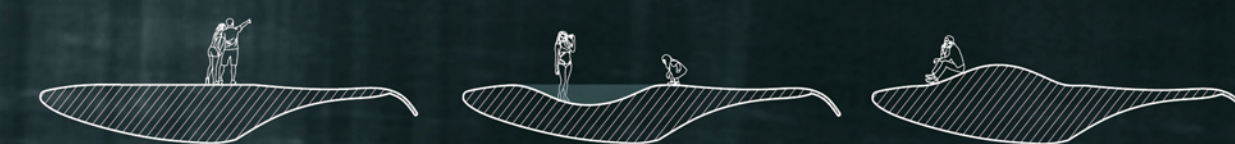

### HIGH PRESSURE

The pendulum motion trains a sea water piston -the high pressure resulting of this process is used to inject salt water at the base of the mast-

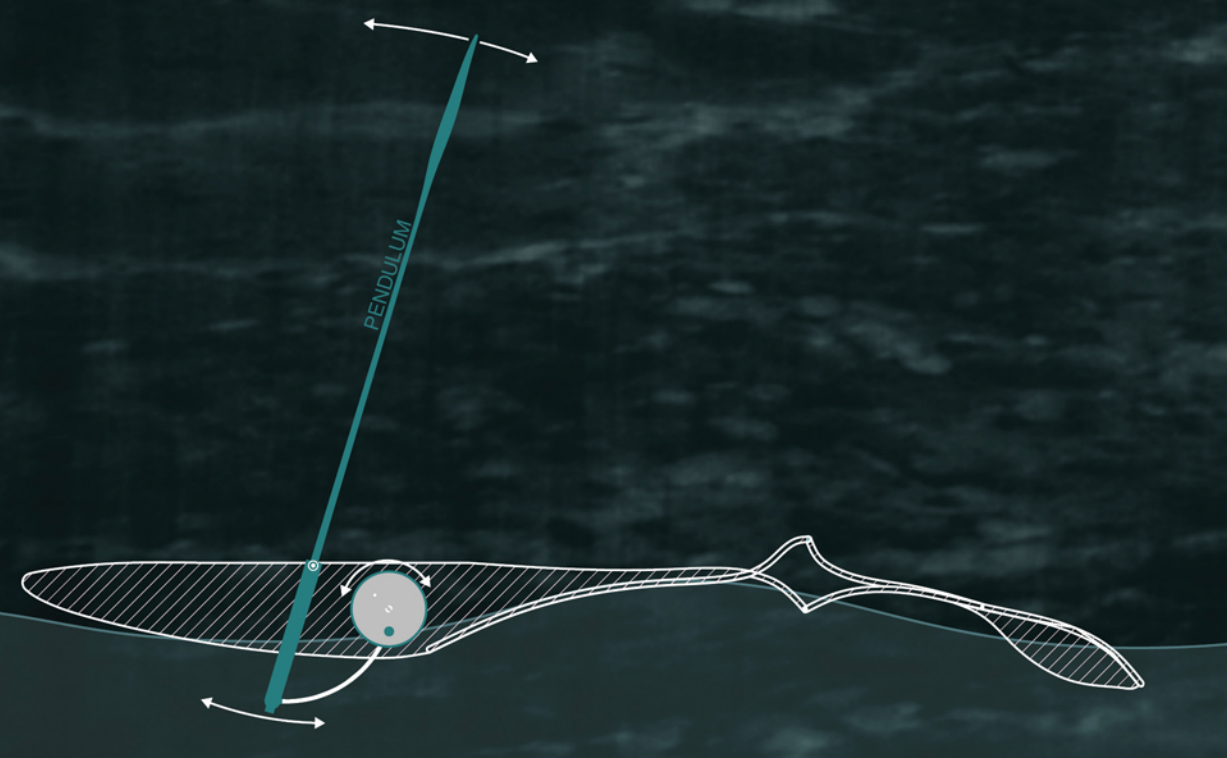

### PLAYFULL SCULPTURE

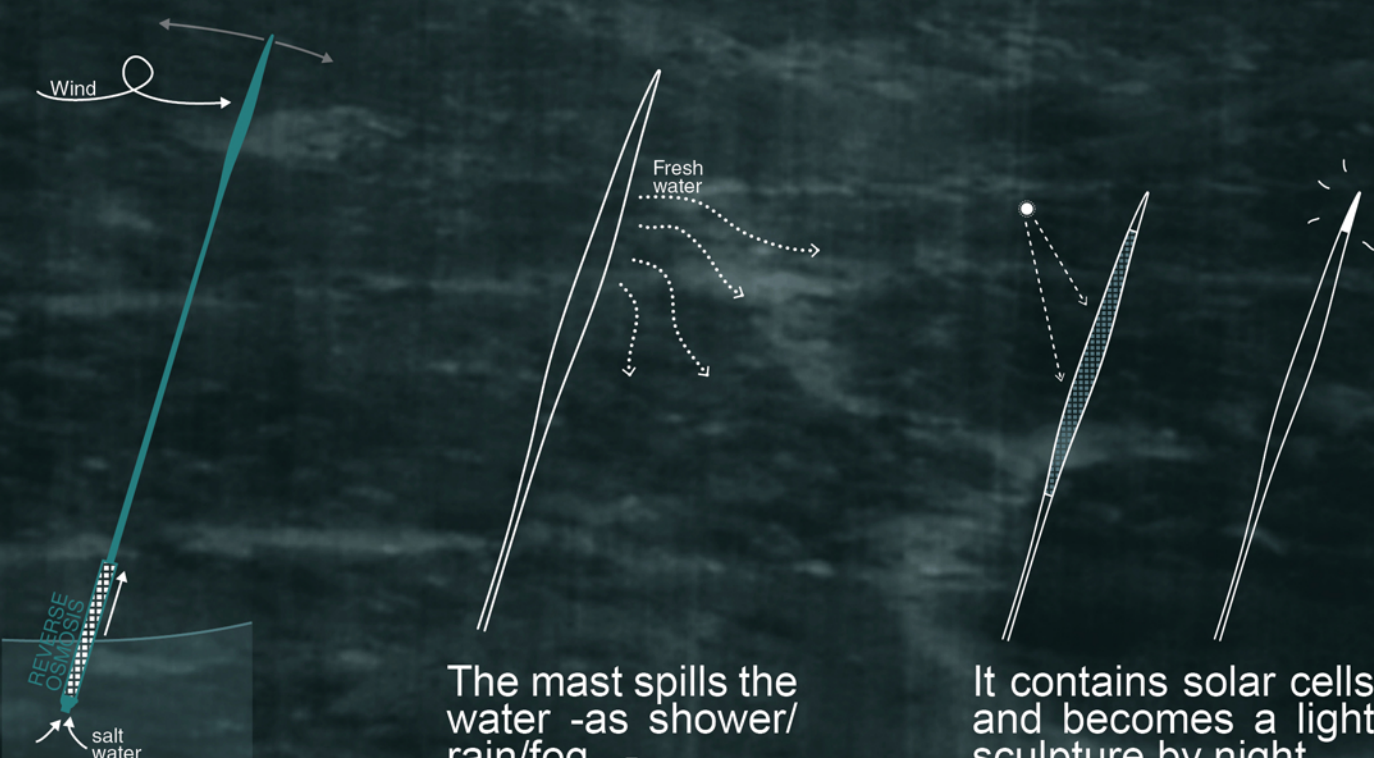

### METRONOME AS KINETIC ENERGY

The movements of the structure initiated by the waves engender a pendulum rotation of the masts.  
-The kinetic energy of the masts then perpetuates the motion-

### REVERSE OSMOSIS

The bottom part of the mast acts as a reverse osmosis cylinder -the pressurized salt water get filtered and only fresh water reaches the top part of the mast-

### HARVESTING FRESH WATER

The water spilled by the masts is harvested by the structure and collected in different recreative pools -undersea hoses allow excess water to be directed toward the beach-
