1 PANELIZATION OF THE FLAMINGO CAN BE ACCOMPLISHED BY USING RECYCLED PLASTIC; APPROXIMATELY 2,267 WATER BOTTLES = 1 PANEL (60 MILLION PLASTIC BOTTLES ENTER AMERICAN LANDFILLS PER YEAR...JUST FOR PERSPECTIVE) OR 60 STANDARD LAWN FLAMINGOS.

2 SOLAR DISTILLATION IS A SIMPLE, YET ANCIENT METHOD FOR HARVESTING POTABLE WATER. SOLAR HEAT EVAPORATES SEA WATER WHICH IN TURN CONDENSES INSIDE THE INTERIOR OF THE FLAMINGO, LEAVING IMPURITIES BEHIND TO BE SAFELY FLUSHED BACK INTO THE OCEAN. THE NOW POTABLE WATER DRAINS INTO AN OUTER TROUGH FOR COLLECTION.

3 THE MAIN STRUCTURE SUPPORTING THE FLAMINGO ALSO ACTS AS THE SIPHON TO BRING SEA WATER INTO THE MAIN BODY'S BASIN.

4 AT THE BASE OF THE LEG, A TRASH COLLECTION FILTER WILL HELP GATHER THE ENDLESS STREAM OF FLOATING GARBAGE IN OUR WATERS. MOST OF THAT BEING PLASTIC BOTTLES!
