

## Desalination the solar boats.

From removing we can take advantage of sea water area by design the solar boats to be land art -generator to increase awareness of drought to people of Santa Monica. By connecting to the pacific park, this area should be continue to have sense of enjoy and fun. Entrance building will build next to pacific park so people can go in from there. It will show people by generate desalination water by passive energy include human energy which come from increase food chain by remove breakwater. Inside the 12 diameters solar boat will contain sea water from filtered inlet. Condensation will play a role on day time to create desalination water which contain in the solar boat. Desalination water will transfer to Santa Monica pier for daily use by plug-in tube.

People can interact with the solar boat by sitting, riding , running , play, jumping ,etc. to create kinetic energy which will use in LED lighting that install on wall of the solar boat. LED Lighting will active in the night to show desalination water level, brilliant combination of public involve process.
