

# INNATUS

THE UNVEILED KINETICS OF NATURE

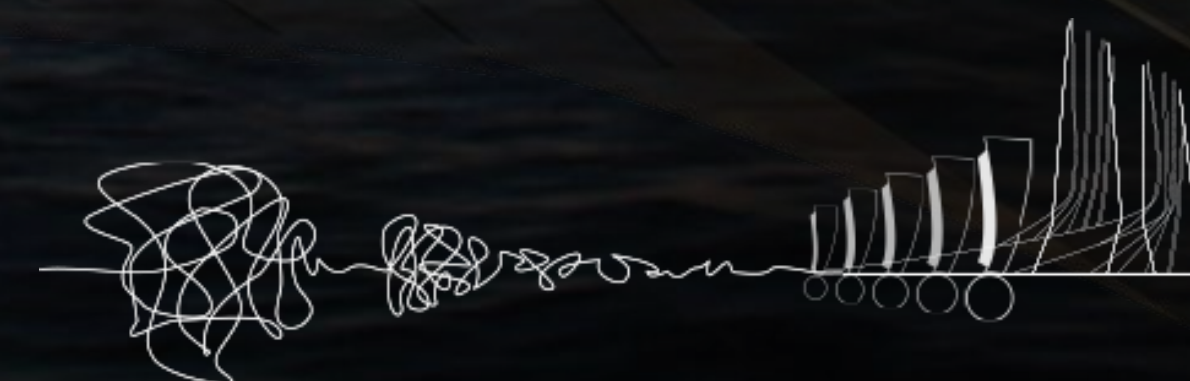

## ENERGY CAPTURE

Introducing intake systems to collect, funnel, and accelerate wind and tidal forces, creating an energy conversion system that produces electricity from these constant fluctuating forces, then releasing it back into the environment.

## ENERGY USE

Adhering to the City of Santa Monica's Sustainable City Plan and Program, our goal is to generate enough energy to power 22,000 homes, 45% of Santa Monica residences.

## ENERGY VISUALIZATION

Creating a unique artistic icon and an interactive experience of natural energy generation for the beachfront, pier, and city while exposing the constant presence and potential of these currently unused alternative energy sources.
